## MODULE 3: CO-ORDINATION EFFICIENCY MULTI-JOINT SYNERGIES IN ALIGNMENT AND COORDINATION

Dubai- UAE  
19-20 March  
2020

## **COURSE INTRODUCTION**

This module evaluates movement patterns to help change muscle function associated to pain, pathology and compromised function. This evaluation helps therapists towards establishing a more optimised movement system for their patients. The observation and analysis of patterns of muscle synergies in functional tasks is examined and options for retraining more efficient movement strategies are presented.

## **COURSE OVERVIEW**

The main focus of this course is to explore functional activities and tasks in patients. Understanding muscle actions and observing synergist activation patterns can inform clinicians of movement patterns associated with pain and impaired function. Directed cueing for facilitation of more optimal patterns are developed in practical workshops.

The clinical value of these skills are both immediate and long term improvements in function and pain. The process, clearly directs therapists towards an effective means of managing movement and alignment, so that individuals may pursue pain free lives, avoiding recurrence and secondary complaints.

## KEY FEATURES

- Enhances ability to assess muscle function through observation of patients' movement patterns during functional tasks
- Develops clinicians' teaching and cueing skillset of their patients' movement patterns to influence muscle function associated with pain, pathology and compromised function
- Combines classic and contemporary evaluation methods with Kinetic Control's world renowned and innovative movement assessment and retraining
- Gives clinicians the ability to choose movement assessment and retraining as the intervention of choice

## LEARNING OUTCOMES

At the end of this course the participant should be able to:

- Display an understanding of the relationship between movement patterns, postural alignment and muscle synergies in functional tasks
- Demonstrate the ability to apply a muscle synergy classification model to multi-joint movement challenges

- Demonstrate the ability to assess the efficiency of alignment and movement patterns so as to reduce pain, the impact of pathology and improve function
- Display an ability to classify individuals into relevant alignment and movement pattern subgroups for the low back, the hip, the neck and the shoulder
- Display an ability to deliver movement intervention strategies to minimise the negative causes or consequences of alignment change and inefficient movement patterns
- Identify how assessment, analysis and retraining of alignment and movement patterns can be integrated in to their clinical practice
- Display a good understanding of why movement matters to postural alignment and recruitment synergies in functional tasks

## Program Tutor

### JACQUELINE SWART

Jacqueline completed her physiotherapy degree from the University of Pretoria in South Africa. She completed the Orthopaedic Manual Therapy course in 1998 and has presented as a lecturer on this course for more than 10 years. She is also a qualified Pilates instructor and uses the studio equipment as part of her specific movement retraining. She qualified as a Kinetic Control Movement Therapist and Accredited Tutor in 2012 and is passionate about sharing the message about the importance of movement control and movement health with her colleagues in South Africa.
